a seven-page report on a restricted area and industrial and military installations southwest of Moscow. The report covers the following installations:

- A possible restricted area, located 18-20 km southwest of the Kiev Station in Moscow, between Mozhayskoye and Rublevskoye shosse. 50X1-HUM
there were a large number of guards in the area. The area was located in a thick and well-cared for pine woods.
- Thermal plant at the intersection of Mozhayskoye and Rublevskoye shosse.
- Military dump probably for fuel, approximately one and one-half km from Ramenki, which is west of Leninskiy rayon, Moscow.
- Military plant in Moscow [Aircraft Engine Plant No. 300].

COUNTRY: USSR (Moskovskaya oblast) REPORT NO.:

SUBJECT: Restricted Area and *Indus* Military Installations
Southwest of Moscow

DATE ACQUIRED

DATE OF REPORT: 25 August 1960

50X1-HUM

RESTRICTED AREA AND MILITARY INSTALLATIONS SOUTHWEST OF MOSCOW

1. A restricted area was located approximately 18 or 20 kilometers from Kiev railroad station in Moscow, and approximately 12 kilometers from Kuntsevo, on Mozhayskoye shosse, the road to Kuntsevo. (See sketch No. I, point No. 1, on page 4 .)

2. The area was approximately two kilometers long.

50X1-HUM

it probably was not too deep since Rublevskoye shosse was located a short distance behind it. It was located in a very thick and well-cared for pine wooded region. The trees in the area were so well placed, and dense, that they gave the impression of having been planted with a purpose in mind. Although a wire fence could not be seen from the road, one was probably located well within the wooded area. Guards could not be

seen either, but [redacted]

[redacted] whenever anyone tried to enter the area, a large number of guards appeared from between the trees.

50X1-HUM

3. The roofs of three or four buildings, which probably were dachas, could be seen from the road. These buildings were two stories high, and were painted white and had red tiled roofs, and were located quite distant from each other. It was rumored that German marshall Von Paulus had been a prisoner in one of these dachas.

4. [redacted]

Area Industrial Plants and Military Installations

5. A thermal plant (sketch No. I, point No. 2 on page 4) was located approximately six or eight kilometers from Kuntsevo, at the point where Mozhayskoye shosse crossed Rublevskoye shosse. The plant was housed in an approximately 10 x 10 x 10 meters high windowless structure. An unknown large number of high tension posts were located adjacent to the structure which, in turn, was surrounded by an approximately two meters high barbed wire fence. [redacted]

50X1-HUM

6. A large military dump, probably a fuel dump, was located approximately one and one half kilometers from Ramenki between a stream [redacted] and the Kaluga-Bryansk-Moscow railroad line. The dump was approximately one kilometer long by half a kilometer wide, and was surrounded by a fence which consisted of two or three rows of barbed wire fences which were approximately two meters high, and which had sentry boxes located on the corners. Guards, who were members of the MVD (sic) and who wore greenish-color uniforms with red epaulets, were posted at these sentry boxes. Other guards were also seen inside this walled-in area. No one was permitted in the vicinity of the wire fence, and the guards would threaten to shoot trespassers. [See point No. 1 on sketch II for location of this dump].

7. Sketch No. III on page 6 , shows the two types of fuel tanks located in the area, and which could be seen through the wire fences. [redacted] silver colored fuel tanks [redacted] more than twenty were located in the area. 50X1-HUM
8. An unidentified number of wooden barracks, which [redacted] were occupied by MVD personnel, were located on the Ramenki side of this dump. A railroad siding entered the area. 50X1-HUM
9. [redacted] all the installations looked permanent and were in good condition. [redacted] 50X1-HUM
10. A Moscow military plant was located in Frunzenskiy rayon, Moscow, on the banks of the Moscow river, and adjacent to the Moscow circumferential railroad line. (See sketch No. IV, point No. 1, on page 7 .) A two and one-half meters high wooden fence topped by a one-half meter high barbed wire fence, surrounded this plant area. Sentry boxes were located on the corners of the above-mentioned fence, and MVD guards, in green uniforms with red epaulets and chevrons, and who were armed with machine guns, were posted at these locations.
11. A U-shaped, brick building with green-painted tin or sheet metal roof was the only plant structure seen from the outside. [redacted] 50X1-HUM
- [redacted] the plant was engaged in jet aircraft engine production, assembly, and testing. Loud, roaring noises that ended in a prolonged whistle, were heard almost daily. These noises were loudest around five and six in the afternoon. Strong winds were produced concurrently with the noises.
12. Foreign laborers were not employed at this plant. [redacted] 50X1-HUM
13. [redacted]
14. The Moscow river railroad bridge (sketch No. IV, point No. 3, on page 7) was also used by pedestrians until 10 o'clock at night when it was closed to them. Three MVD guards were always posted at this bridge, one at each end, and one in the middle, who prohibited pedestrians from stopping on the bridge, or from using it at night.
